

Report on IOS-3.2 Activities

Presented by
T.C. Luce

Presented at
7th ITPA Integrated Operation Scenarios
Topical Group Meeting
Kyoto, Japan

Oct. 19, 2011

Activity since April on IOS-3.2

- JT-60U talk shown by Shun yesterday described recipes for advanced scenarios
- AUG has repeated a recipe for high $\min(q)$ to see how it needs to be modified for the W wall

How to Make Progress on this Task?

- **Based on the experience with the IOS-4.1 activity, I think we need a few well defined questions to try to answer with the database**
 - In April we discussed focus on finding common elements across machines for forming target q profiles with $\min(q) = 1.5-2.0$ and $2.0-2.5$
- **From the discussion yesterday, we could also try to look for common features of ITB recipes, but this has been tried several times**
