

# Report on IOS-4.3 Activities

Presented by  
T.C. Luce

Presented at  
7<sup>th</sup> ITPA Integrated Operation Scenarios  
Topical Group Meeting  
Kyoto, Japan

October 19, 2011

# Activity to Date on IOS-4.3

- **As far as I know, the only experimental activity has been shown for AUG yesterday by Jörg.**
  - Indicates feasibility of “small” (2x)  $v^*$  scan
- **DIII-D had an experimental proposal, but it fell off the schedule at the end**
- **JET should have advanced inductive operation before the next meeting, but  $v^*$  scan?**
- **JT-60U has not looked for matches in the database**
- **I have not looked for inter-machine or intra-machine matches in my limited database**
